Brief Summary

The concept of definition map is a graphic organizer that helps students learn new vocabulary through a word's definition, synonyms, and examples that apply to that word.

Notes

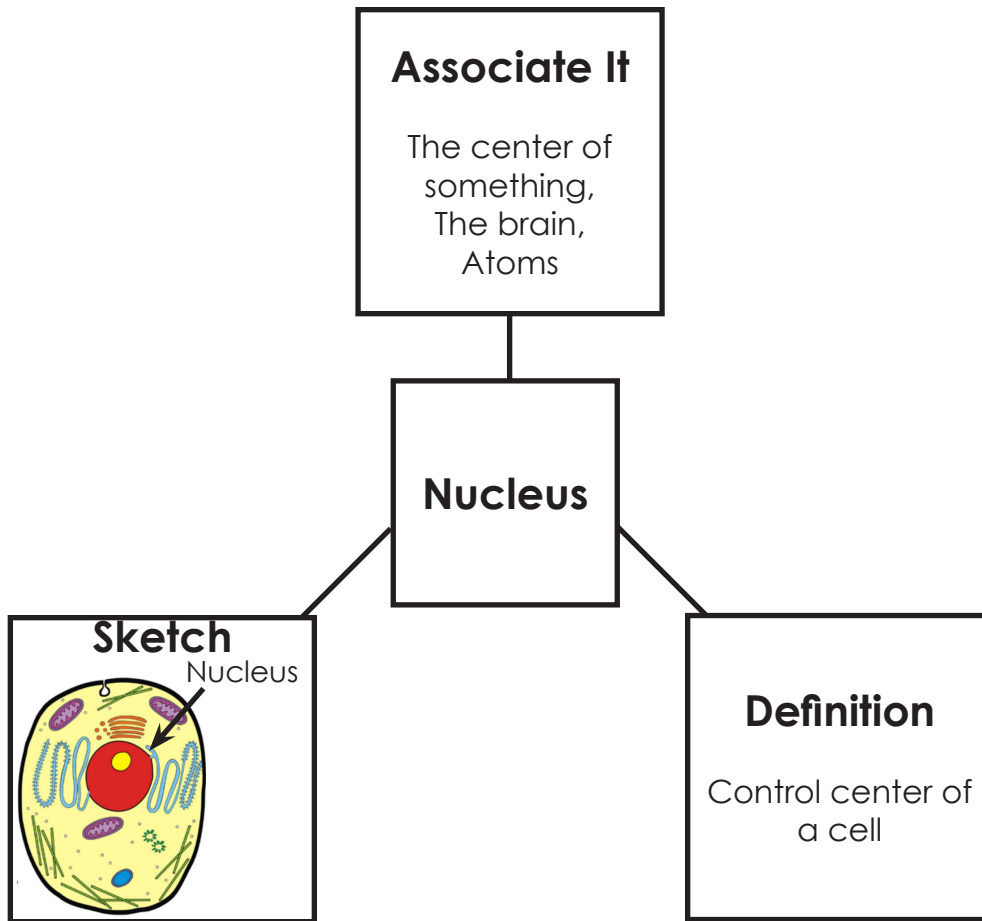

See page 18 of source for more information. Following this page are a sample of how the concept of definition map can be used in STEM EDA and sample templates.

Example Use in STEM EDA

The concept of definition map can be used for any vocabulary (boldfaced or not) in any of the STEM EDA modules. Sometimes when working with esoteric vocabulary, the words may not have clear synonyms or examples. Those boxes can be replaced with boxes that students use to describe with what they associate the term and a sketch of the term, respectively (see nucleus example on following page).
